

Artsy Production — Part 1 Audit Finalized Improvements

Decision status: Part 1 is finalized for the current planning phase.

1. Business Model

Artsy is a Managed Creative Services Platform. Artsy contracts with the client, controls assignment and QA, handles disputes/refunds, and owns the client relationship.

2. Financial Model — ■8,000 Example

Item	Amount
Customer payment	■8,000
GST	−■1,220
Payment gateway	−■189
Infrastructure allocation*	−■115
Available for split	■6,476
Creator — 70%	■4,533
Artsy — 30%	■1,943

*■115 is a planning allocation, not a final vendor quote. Actual infrastructure cost will be recalculated from real usage.

3. Refund Policy — System-Measurable

Status	System evidence	Refund
NOT_STARTED	No raw-footage download/import evidence, no timeline, no meaningful activity.	100%
STARTED	Footage imported/organized OR timeline created, with actual editing/progress evidence.	50%
SUBSTANTIAL_PROGRESS	Approximately 50%+ creative work; substantial timeline/creative work; Admin verifies milestone.	0%

4. Tracking Architecture

V1 records secure raw-footage download events, project start, footage confirmation, timeline/progress milestones, timestamps and Admin approvals in an immutable activity log. A normal website cannot directly see activity inside Premiere Pro/DaVinci Resolve. A future Artsy Desktop Agent can track Artsy-project-related activity with freelancer consent.

5. Revisions & Change Orders

Two revision rounds are included. Minor changes only. Major/out-of-scope work requires a Change Order, client approval and additional payment before extra work continues.

6. Creator System

Creator agreement/NDA is mandatory before the first project. Working payout model: 70% of the amount available after GST, gateway and project infrastructure allocation; Artsy retains 30%. The Admin must be able to change the percentage later.

7. Google Storage

Do not migrate to Google Workspace yet. Design the architecture so migration from the current Google One setup is straightforward. Future direction: business-controlled Workspace storage and resumable uploads.

8. V1 AI

V1 uses no AI for pricing, creator matching or QA. Use deterministic rules, Admin control and data collection. AI/scoring comes later after sufficient operational data.

9. TDS

TDS classification/rate remains an external confirmation item. Artsy's CA/accountant must confirm it before payout/tax logic is finalized.

10. Part 1 Build Direction

Implement structured pricing rules and immutable quotes; Change Orders; two revision rounds; creator lifecycle and agreement; secure raw-footage access/download logging; refund state machine; financial ledger; configurable 70/30 payout; manual V1 assignment and QA; and data collection for future AI.

Part 1 is now decision-locked for the current planning phase. Part 2 can be processed next.
